SUMMARY

Energy analyst with a 2-year engineering foundation and experience in various energy markets, financial analysis, and techno-economic modeling projects. Developed optimization and economic models across hydrogen, refining, and electrification, combining physical market expertise with rigorous quantitative analysis.

EDUCATION

ESCP Business School **Paris, FR | Sep. 2025–Jun. 2026, Graduating Feb. 2027**

MSc in Energy Management, Specialization in Finance and Investment, GPA: 3.8/4.0

Thesis: Carbon as Capital: Pricing Energy Transition Assets with a Discounted Carbon Flow Model

University of Colorado Boulder **Boulder, CO, USA | Aug. 2019–May 2023**

BS in Mechanical Engineering, Specialization in Energy Engineering, GPA: 3.96/4.00, Summa Cum Laude

PROFESSIONAL EXPERIENCE

Hy24, Ardian JV | Investment Analyst Intern **Paris, FR | Sep. 2026–Feb. 2027**

- Building project finance models for carbon capture value chain assets, analyzing IRR and LCOCO2 sensitivity to capex, power prices, and offtake terms
- Evaluating clean hydrogen infrastructure opportunities through financial analysis, market research, and assessment of commercial, regulatory, technical, and project-development risks
- Supporting portfolio monitoring and project follow-up through investment reporting and reviewing operational milestones

ENGIE | Energy Trading Analyst Consultant (ESCP) **Paris, FR | Mar.–Jun. 2026**

- Built a regression-based switching model in Python covering 11 Asian markets, 17 industrial sectors, and ~200 country-sector-fuel pairs, quantifying incremental gas demand as a function of price spreads against incumbent fuels
- Identified and corrected a structural double-counting bias in the inelastic demand calibration, reducing absolute backtest error by two-thirds (−33% to +11%) and validating the fix across all priority pairs

Saint-Gobain | Process and Quality Engineer **Paris, FR | Jan. 2025–Jul. 2025**

- Conducted quantitative analysis and 10+ trials to isolate key product performance drivers, identifying factors responsible for up to 15% of observed variance and translating findings into operational recommendations
- Led cross-site validation across three European plants (Czech Republic, Poland, Hungary), testing findings against real-world production data and identifying opportunities to improve performance by ~2%

Saint-Gobain | Research Engineer I **Boston, MA, USA | Jul. 2023–Jan. 2025**

- Conducted technical research and served as the liaison between client and research teams to develop new carbon capture technologies, reducing energy intensity by 25–40%
- Developed circular-economy investment cases, repurposing 30+ metric tons/year of industrial scrap into new revenue streams for electric vehicle batteries while eliminating landfill costs
- Built a Python-based machine learning optimization model to improve production scheduling, delivering ~5% efficiency gains and an estimated $1–1.5M annual margin improvement

Phillips 66 | Engineering Intern (Project & Mechanical) **Texas & Montana, USA | Summers 2021 & 2022**

- Evaluated alternative feedstock investments, piloting integration of pyrolysis oil into refinery operations for circular economy initiatives
- Conducted financial and technical analysis to justify an emissions-reduction project, securing $180K CAPEX and delivering $60K/year OPEX savings
- Identified and mitigated $100K+ in operational and schedule risk during a major refinery turnaround

NSF ASPIRE Research Center | EV Researcher **Boulder, CO, USA | Aug. 2021–May 2022**

- Built a Python-based techno-economic model integrating electric vehicle adoption, power generation, and emissions, quantifying $55.5M in avoided health costs to inform transport infrastructure investment decisions

LEADERSHIP

University of Colorado Alumni Advisory Board, Co-Chair (20-member board) **Jul. 2023–Present**

- Provide strategic guidance to university leadership on key decisions, growth initiatives, and student outcomes
- Raised $10M to fully fund tuition for first-generation college students, expanding access and retention

SKILLS

- **Programming & Tools**: Python (pandas, NumPy, statsmodels), SQL, Excel/VBA, Power BI, Tableau, Bloomberg
- **Methods**: DCF/project finance modeling, regression and time-series analysis, backtesting, optimization
- **Languages**: English: Native | French: B1, learning
