SUMMARY

Engineering background with international experience in industrial, infrastructure, and low-carbon projects. Experienced in developing energy solutions, evaluating project economics, capital allocation decisions, operational risks, and value creation levers across energy and industrial assets.

EDUCATION

ESCP Business School **London, UK / Paris, FR | Sept. 2025 – June 2026, Graduating Feb. 2027**
MSc in Energy Management, Specialization in Finance and Investment
Key Projects: Chevron Consulting Case Study, NextEra Company Valuation, Coral Sul FLNG Financing Evaluation

University of Colorado Boulder **Boulder, CO, USA | Aug. 2019 – May 2023**
BS in Mechanical Engineering, Minor in Energy Engineering, GPA: 3.96/4.00, Summa Cum Laude

WORK EXPERIENCE

Saint-Gobain

Sustainability Engineer **Paris, FR | Jan. 2025 – July 2025**

- Led cross-site performance assessments across three European plants, translating technical findings into actionable investment and standardization decisions to drive circular economy goals.
- Coordinated US-FR teams to accelerate deployment of new operational standards by 6 months, improving asset reliability and reducing downside risk.

Research Engineer I, Graduate Program

Boston, MA, USA | July 2023 – Jan. 2025

- Aligned client and research teams to develop low-carbon energy transition technologies, reducing carbon capture energy intensity by 25–40% and facilitating long-term decarbonization strategies.
- Developed circular-economy strategic investment cases, repurposing 30+ metric tons/year of industrial scrap into new revenue streams while eliminating landfill costs.
- Built a Python-based machine learning optimization model to improve production scheduling, delivering ~5% efficiency gains and an estimated \$1–1.5M annual EBITDA uplift.

Phillips 66

Project Engineering Intern

Houston, TX, USA | May 2022 – Aug. 2022

- Performed evaluation of alternative feedstock investments, piloting integration of pyrolysis oil into refinery operations for circular economy initiatives.
- Conducted financial analysis to justify an emissions-reduction CAPEX project, securing \$180K investment and delivering \$60K/year OPEX savings.

Risk Analysis Intern

Billings, MT, USA | May 2021 – Aug. 2021

- Identified and mitigated \$100K+ in operational and schedule risk during a major refinery turnaround.
- Handled risk management and execution discipline during high-capital-intensity maintenance operations.

NSF ASPIRE Engineering Research Center

Vehicle Electrification Researcher

Boulder, CO, USA | Aug. 2021 – May 2022

- Built a techno-economic impact model using Python to link EV adoption, power generation, and emissions.
- Quantified \$55.5M in avoided health costs under electrification scenarios, supporting transport infrastructure investment decision-making.
- Assessed economic and distributional impacts of energy transition investments at a metropolitan scale.

LEADERSHIP

University of Colorado Alumni Advisory Board, Co-Chair (20-member board)

July 2023 – Present

- Provided strategic guidance to university leadership on key decisions, growth initiatives, and student outcomes.
- Raised \$10M to fully fund tuition for first-generation college students, expanding access and retention.

SKILLS

- **English:** Native | **French:** B1, learning
- **Technical and Quantitative:** Excel (macros), Scenario and risk analysis, Python (optimization, data analysis), Power BI, Tableau, Six Sigma Yellow Belt, Bloomberg
- **Interests:** Climate Fresk Facilitator
